

PROJECT OVERVIEW

The Fellowship Attendance Dashboard was developed to provide leadership with a comprehensive view of Fellowship centres' performance, attendance trends, demographic participation, and Fellowship evangelism outcomes across the city.

The analysis covers 2025 and 2026 weekly data collected from over 1,000 fellowship centres organized into provinces and regions. The dashboard consolidates operational and attendance information into a single reporting platform, enabling leadership to monitor growth, identify areas requiring intervention, and make data-driven decisions.

The project focuses on five key areas:

- Executive Performance Monitoring
- Centre Activity and Operational Effectiveness
- Demographic Participation Analysis
- Attendance Trend and Engagement Analysis
- Evangelism and Assimilation Performance

The objective is to transform weekly attendance records into actionable insights that support Fellowship system growth, church growth, improve operational effectiveness, and strengthen outreach efforts.

BUSINESS QUESTIONS

The fellowship attendance reporting process generated large volumes of weekly data but provided limited visibility into trends, performance drivers, and opportunities for improvement. Leadership required answers to the following strategic questions:

Growth and Engagement

- Is overall attendance growing or declining or remaining stable over time?
- How does current attendance compare with the same period in the previous year?
- Which regions and provinces are contributing most to attendance growth?

Operational Effectiveness

- What percentage of fellowship centers are actively holding meetings?
- Which regions and provinces demonstrate the highest and lowest center activity rates?
- Is center activity influencing attendance performance?

Demographic Participation

- What is the demographic composition of attendees (Male, Female, Children)?
- Which demographic groups are growing or declining?
- Are there regional differences in demographic participation patterns?

Evangelism and Assimilation

- Are fellowship centers attracting new people?
- How many first timers are becoming new converts?
- Which regions demonstrate the strongest evangelism performance?

DATA AND METHODOLOGY

Data Source

- 1 & half Years of Weekly Data
- 1,000+ Fellowship Centers
- 12 Regions
- Multiple Provinces

Metrics Collected

- Attendance
- Center Activity
- First Timers
- New Converts
- Demographics

Analytical Focus Areas

- Growth
- Operations
- Demographics
- Evangelism
- Efficiency

Output

- 5 Interactive Dashboards
- Executive KPIs
- Trend Analysis
- Regional & Provincial Performance Monitoring

EXECUTIVE SUMMARY

Attendance Growth

-26.8%

Center Activity Rate

79.6%

First Timers Growth

1.5%

New Converts Growth

9.6%

Key Findings

- Attendance declined by 26.8% YoY.
- Center Activity Rate declined from 80.8% same period last year to 79.6%.
- First Timers increased by 1.5% YoY
- New Converts increased by 9.6% YoY.
- Provinces D14, A6, A15, D7, D5, C1, D16, E6, E5 had particularly low Center Activity Rates thus contributing to overall decline.
- Region-10 and Region-8 contributed more than half the overall First Timers.
- Overall, male engagement is low, and falls below 20% in some provinces.

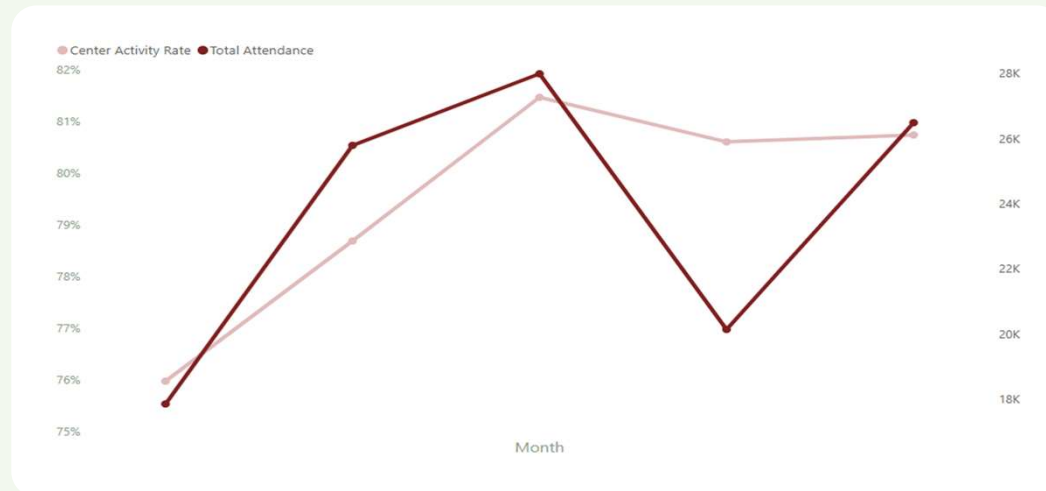

Leadership Focus

- Improve Center Activity Rate in underperforming provinces.
- Strengthen visitor assimilation and follow-up process.
- Create strategies to encourage existing church members to return to attending meetings.
- Replicate Best practices from high performing regions and provinces.
- Organize programs that encourage the male demography to attend meetings.

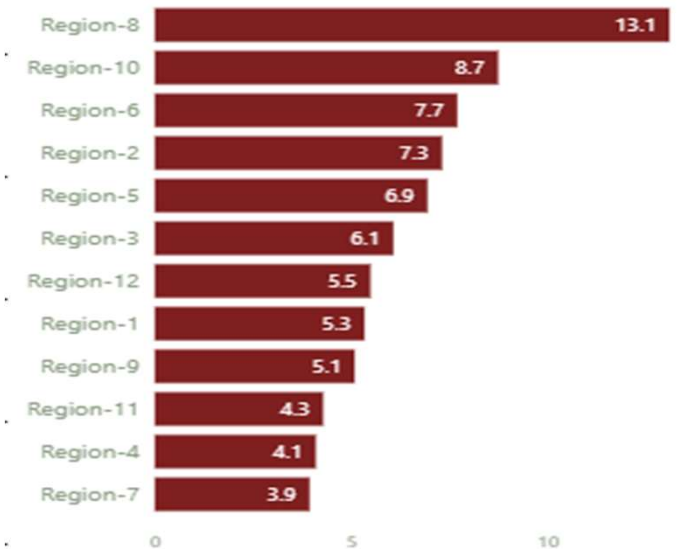

Attendance declined substantially, but sustained long-term growth will depend on improving operational consistency, strengthening visitor assimilation, return of existing/old members and scaling successful practices across the fellowship network.

ATTENDANCE INSIGHTS

Regional Attendance Rate

Key Findings

- Attendance declined by 26.8% YoY. Decline cuts across all Regions
- Average attendance per cell meeting(Attendance Rate) declined from 7 to 6 YoY
- 6 Regions particularly have low Average Attendance rate below 6
- 17 Provinces have Average Attendance Rate below 4

Attendance decline is being largely driven by low and inconsistent center activity with several Provinces having activity well below 50%.

CENTER ACTIVITY INSIGHTS

JAN-MAY 2025

161,575

The total attendance of the WSF fellowship meetings for the selected Region(s) and/or Province, for the selected period.

128

Indicates the average number of people that are attending WSF meeting in each Province(s) in the selected Region(s) for the selected period.
Province Attendance Rate.

80.8%

Indicates the average activity rate of the WSF centers within the Province(s) or Region(s). How many centers are holding meetings compared to the total centers within the Province or Region?

JAN-MAY 2026

118,287

The total attendance of the WSF fellowship meetings for the selected Region(s) and/or Province, for the selected period.

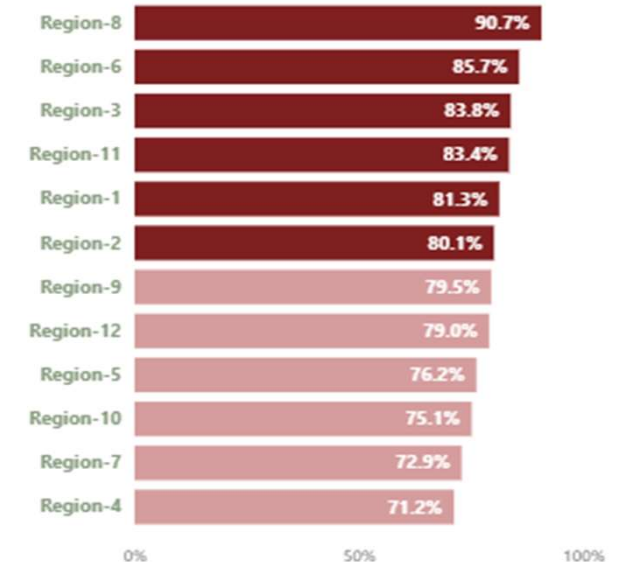

95

Indicates the average number of people that are attending WSF meeting in each Province(s) in the selected Region(s) for the selected period.
Province Attendance Rate.

79.6%

Indicates the average activity rate of the WSF centers within the Province(s) or Region(s). How many centers are holding meetings compared to the total centers within the Province or Region?

Regional Center Activity Rate

Key Findings

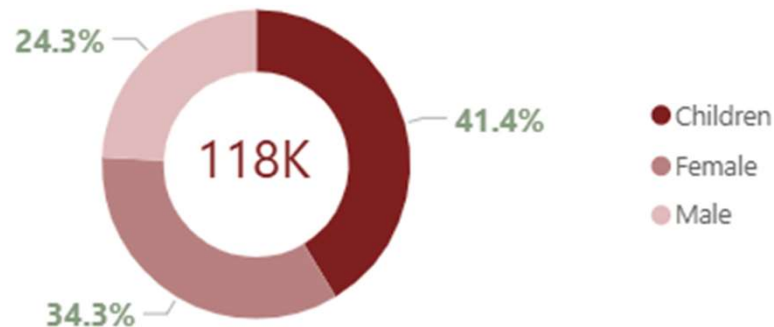

- Center Activity Rate declined from 80.8% to 79.6% YoY
- 28 provinces reported Average activity rates below 80%, resulting in missed opportunities for engagement and growth.
- Regional and Province performance varies significantly, suggesting differences in leadership effectiveness, coordination, and monitoring

Center activity is one of the strongest predictors of attendance performance; increasing the percentage of centers that hold meetings consistently represents a significant opportunity for growth.

DEMOGRAPHIC INSIGHTS

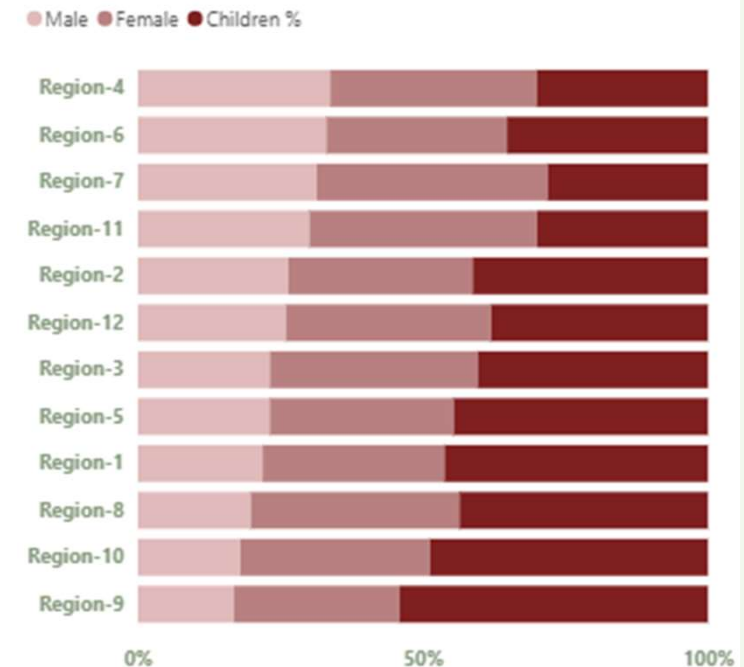

Demographic Composition

Key Findings

- Children represented the largest share of total attendance
- Demographic composition remained relatively consistent
- Children attendance represents an important indicator of family engagement and future membership growth.

Regional Demography Distribution

Demographic participation remains diverse across the network, with opportunities to strengthen engagement among underrepresented groups while sustaining growth in family participation.

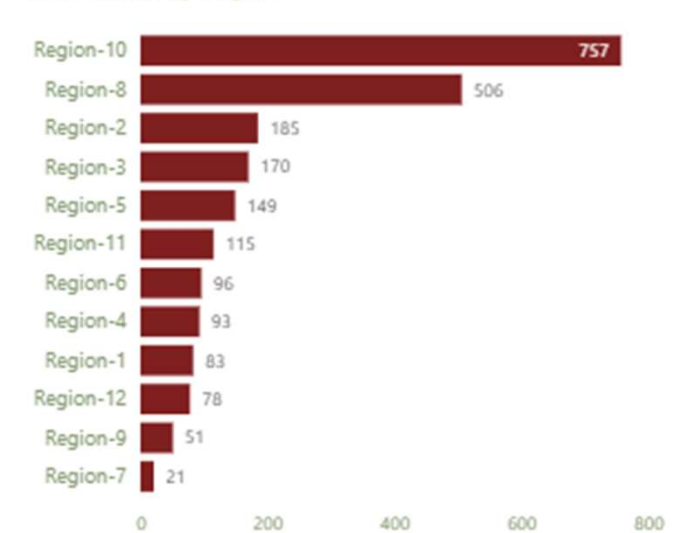

EVANGELISM INSIGHTS

First Timers by Month

First Timers by Region

Key Findings

- Visitor inflow showed a decline after February, indicating that a sustained evangelism and community engagement effort is needed.
- Significant differences exist between regions.
- 5 regions have less than 10% of visitors being assimilated as New Converts.

Sustained church growth depends not only on attracting First Timers but also on effectively converting and assimilating them into active participants within the fellowship network.

KEY RECOMMENDATIONS

Improve Center Activity and Consistency

Increase meeting consistency in low-performing provinces to maximize attendance growth and member engagement.

Replicate Best Practices

Identify and scale successful strategies from high-performing regions and provinces across the network.

Strengthen Visitor Assimilation

Improve follow-up processes to convert more First Timers into active participants and New Converts.

Target Underperforming Provinces

Implement focused interventions for regions and provinces with low attendance, outreach, or activity rates.

Enhance Demographic Engagement

Develop targeted initiatives to increase participation among underrepresented demographic groups in each Province.

Institutionalize Data-Driven Decisions

Use dashboard insights in regular leadership reviews to monitor performance and drive continuous improvement.

The most significant opportunities for growth lie in increasing center activity, strengthening visitor assimilation, and scaling the practices of high-performing regions across the network.

CONCLUSION

The data shows that growth is achievable not only through expansion, but through improving the effectiveness, consistency, and outreach performance of existing fellowship centers.
